Small-scale project management is the specific type of project management of small-scale projects. These projects are characterised by factors such as short duration; low person hours; small team; size of the budget and the balance between the time committed to delivering the project itself and the time committed to managing the project. They are otherwise unique, time delineated and require the delivery of a final output in the same way as large-scale projects.

However, we studied small farms (<5 ha); thus, our results may not generalize to large scale land sharing systems. Furthermore, rather than concluding that land sparing is generally superior to land sharing, we suggest that the optimal approach depends on the crop, local climate, and existing land use patterns.
