[Octopuses and lobsters have feelings and are sentient], MPs argue

Using an exceptionally preserved fossil from South Africa, a particle accelerator, and high-powered x-rays, an international team including a University of Minnesota researcher has discovered that not ...

With 439 excerpts from the writings of C.G. Jung. "This excursion is intended to supplement the main literature on the anima. Since that literature provides a goodly phenomenology of the experience of anima, I shall look here more closely at the rather neglected phenomenology of the notion of anima. Experience and notion affect each other reciprocally. Not only do we derive our notions out of our experiences in accordance with the fantasy of empiricism, but also our notions condition the nature of our experiences." (James Hillman)

Lost your mate, your energy, peace of mind? Welcome to midlife crisis. Jung's basis concepts--persona, shadow, anima/animus, complexes, projection and typology--come alive as one man's plight is dramatically portrayed with humor, compassion and ruthless clarity.

This is a book of psychoanalysis. However, the patient is not a human, but place and imagination of placing. The islands of Okinawa, placed on the border of Japan and Taiwan, consist of a complex of subtropical islands in the East China Sea with marine life abundantly found in the beautiful emerald ocean. However, Okinawa is a history of deterritorialization starting from colonization of the former Ryukyu kingdom by Japan in 1879, followed by the World War II and the US occupation until 1972. These tiny dots on the Pacific Ocean became subject to the collective fate of the world. However, placing oneself in these tiny dots and looking at the world from within provides a picture that is totally different from looking at them externally. There are numerous accounts by ethnographers and anthropologists who carried out research in this region of carnival masks and costumes, their belief in the oceanic paradise, worship of nature, ancestor and women's spirituality. Psychoanalysis of the anthropological research unfolds complexity of this field and deconstructs dualistic modern mind that separates nature from psyche. What appears is an ecological perspective of the psyche of the new era.

In this first extensive Jungian treatment of Milton's major poems, James P. Driscoll uses archetypal psychology to explore Milton's great themes of God, man, woman, and evil and offers readers deepened understanding of Jung's profound thoughts on Godhead. The Father, the Son, Satan, Messiah, Samson, Adam, and Eve gain new dimensions of meaning as their stories become epiphanies of the archetypes of Godhead. God and Satan of Paradise Lost are seen as the ego and the shadow of a single unfolding personality whose anima is the Holy Spirit and Milton's muse. Samson carries the Yahweh archetype examined by Jung in Answer to Job, and Messiah and Satan in Paradise Regained embody the hostile brothers archetype. Anima, animus and the individuation drive underlie the psychodynamics of Adam and Eve's fall. Driscoll draws on his critical acumen and scholarly knowledge of Renaissance literature to shed new light on Jung's psychology of religion. The Unfolding God of Jung and Milton illumines Jung's heterodox notion of Godhead as a quarternity rather than a trinity, his revolutionary concept of a divine individuation process, his radical solution to the problem of evil, and his wrestling with the feminine in Godhead. The book's glossary of Jungian terms, written for literary critics and theologians rather than clinicians, is exceptionally detailed and insightful. Beyond enriching our understanding of Jung and Milton, Driscoll's discussion contributes to theodicy, to process theology, and to the study of myths and archetypes in literature.

What is healing? What really determines it? How can we make it happen? It is increasingly clear that there is not just one single kind of medicine and that paths to healing flow through the integration of multiple pieces of knowledge and the combination of many perspectives. In light of the latest research into neurophysiology, psyche science and quantum physics, this book outlines the seven principles of the powerful interaction between psyche and body in healing processes, providing scientific answers to questions about the mechanisms which trigger it and identifying therapies that allow us to turn these internal switches on. This is demonstrated through reflections, examples, and real cases shared by the author, a psychiatrist and doctor who has completed several rigorous trainings but maintains an open mind and has been committed for more than 15 years to seek healing of serious illnesses in the psychosomatic unit by using therapeutic synergies that strengthen official care practices with innovative treatments, with her passionate work to painlessly repair suffering, with the patient, or rather the person, always and constantly at the centre.

Four brilliant essays by the author of 'Hermes and His Children' hailing the elemental force of the irrational in a world that is all too often 'explained' and 'understood': Moon Madness -- Titanic Love; Cultural Anxiety; Reflections on the Duende; Consciousness of Failure. López-Pedraza passionately urges us to acknowledge our roots in the soul and our debt to the unknowable.

Bringing together an international team of historians of science and philosophy to discuss the fate of matter and form, this volume shows how disputes about matter and form spurred innovation as well as conservatism in early modern science and philosophy.
